VOLUME 1

MARROW SS SURGERY

## Dr. Rohan Khandelwal

MS General Surgery, MRCS, FIBD, FICS

Dr. Rohan is an Onco-plastic Breast Surgeon trained at the University of Maryland (USA). He has successfully headed a Breast Cancer Unit for the last 10 years and is currently based at CK Birla Hospital, Gurgaon. In addition to his clinical practice, he has been actively involved in teaching for more than 14 years.

# **General Surgery**

**MARROW**  
— Super Speciality

## Instructions

- The notes must be used in conjunction with the Marrow SS Surgery videos and should not be considered standalone material.

## Please note:

- The information in this book has been printed based on the transcript of the Marrow SS Surgery videos.
- The information contained in this book is for educational purposes only. The content provided is not intended to substitute for professional medical advice, diagnosis or treatment.
- This book cannot be sold separately. It has been made available to only select eligible users who have an active subscription to Marrow SS Surgery videos.
- The text, images, slides, and other materials used in this book have been contributed by the faculty, who are subject matter experts. We have merely reproduced them as video transcripts in this book.
- The notes have been consciously designed in a way that is concise and revisable. To ensure this, we have intentionally added only the most relevant modules and images that are needed for you.
- Reasonable care has been taken to ensure the accuracy of the information provided in this book. Neither the faculty nor Marrow takes any responsibility for any liability or damages resulting from applying the information provided in this book.
- This set contains notes of all main videos published in the app until August 2025. You can find notes for any additional videos published after this date within the app under the videos section.

# Contents

## Volume - 1

### Foundation of General Surgery

1.	Patient Safety, OT Zones and Surgery Positions	1
2.	Surgical Blades and Energy Sources	7
3.	Surgical Nutrition	13
4.	Sutures, Knots and Surgical Drains	23
5.	Causes of Post-Op Fever	31
6.	Wounds and Surgical Site Infections	40
7.	Shock I	46
8.	Shock II	52
9.	Common Surgical Swellings (Clinical Case Discussion)	57
10.	Common Ulcers (Clinical Case Discussion)	66
11.	Surgical Instruments	72
12.	Day Care Surgery	84

### Trauma

13.	Basics of Trauma Management	89
14.	Head Trauma	100
15.	Thoracic Trauma	111
16.	Abdominal Trauma	121
17.	Thermal Injuries	133
18.	Trauma : Emergency Scenarios	145

### Breast

19.	Breast I	149
20.	Breast II	160

21.	Breast III	170
22.	Benign Breast Disease	179
23.	Breast : Clinical Case Discussion and Operative Videos	188

## **Endocrine System**

24.	Thyroid I	192
25.	Thyroid II	204
26.	Thyroid III	215
27.	Clinical Case of Neck Swelling	227
28.	Parathyroid	230
29.	Adrenal Gland & NET	237

## **Gastrointestinal and Abdominal Surgery**

30.	Esophagus I	246
31.	Esophagus II	257
32.	Esophagus III	263
33.	Upper GI Hemorrhage	274
34.	Stomach I	284
35.	Stomach II	292
36.	Stomach III	297
37.	Intestinal Obstruction I	311
38.	Intestinal Obstruction II	323
39.	Small and Large Bowel : Benign Conditions	329
40.	Appendix and Its Disorders	342
41.	Colorectal Polyps and Cancer I	354
42.	Colorectal Polyps and Cancer II	363
43.	Rectum and Anal Canal I	370
44.	Rectum and Anal Canal II	382

45.	Liver I	387
46.	Liver II	398
47.	Gall Bladder and Biliary Tree I	409
48.	Gall Bladder and Biliary Tree II	417
49.	Benign Pancreatic Conditions	429
50.	Malignant Pancreatic Conditions	443
51.	Abdominal Lump (Clinical Case Discussion)	458
52.	Spleen	464
53.	Abdominal Emergencies	471

## **Volume - 2**

### **Urology**

54.	Testicular Disorders I	483
55.	Scrotal Swelling (Clinical Case Discussion)	493
56.	Testicular Disorders II	494
57.	Urethral and Penile Disorders	499
58.	Kidney I	510
59.	Kidney II	525
60.	Bladder	541
61.	Prostate Disorders I	547
62.	Prostate Disorders II	555

### **Speciality Surgery**

63.	Bariatric Surgery	563
64.	Principles of Minimally Invasive Surgery	570
65.	Transplant Surgery	575
66.	Plastic Surgery, Wounds and Cleft Lip I	585
67.	Plastic Surgery, Wounds and Cleft Lip II	595

68.	Neurosurgery I	600
69.	Neurosurgery II	607

## **Hernia and Its Management**

70.	Hernia I	615
71.	Hernia II	627
72.	Inguinoscrotal Swelling (Clinical Case Discussion)	638

## **Vascular Surgery**

73.	Deep Vein Thrombosis	642
74.	Varicose Veins	649
75.	Arterial Disorders I	660
76.	Arterial Disorders II	667
77.	Lymphatic Disorders	680

## **Head and Neck Including Faciomaxillary Surgery**

78.	Oral Cancer	690
79.	Salivary Glands	702
80.	Oral Lesions (Clinical Case Discussion)	712

## **Special Topics in General Surgery**

81.	Skin Tumors and Soft Tissue Sarcomas	716
82.	Thorax and Mediastinum	725

## **Recent Updates Bailey 28th Edition**

83.	First 5 Chapters	737
84.	Nutrition	743
85.	Head and Neck	747
86.	Endocrine Surgery	756

87. GIT Part I	765
88. GIT Part II	776
89. GIT Part III	786
90. Trauma Surgery	792
91. Vascular Surgery	796
92. Transplant Surgery	800
93. Urology	808

## **Biostatistics**

94. Introduction to Data in Biostats	813
95. Measures of Central Tendency and Variation	815
96. Normal Distribution Curve	818
97. Concept of Probability Value	821
98. Tests of Significance	824
99. Correlation, Regression and Skew	825
100. Sampling Methods and Calculation	829
101. Probability and Tiles	833
102. Graphs	836
103. Biostats Review and QA Round	849

## **Epidemiology**

104. Analytical Epidemiology	857
105. Advanced Analytical Study Designs	859
106. Experimental Epidemiology	862
107. Evidence Based Medicine	868

## **Screening**

108. Advanced Concepts in Screening of Disease	872

# PATIENT SAFETY, OT ZONES AND SURGERY POSITIONS

----- Active space -----

Types of events :

	Definition	Example
Adverse event	Adverse event : An incident that results in harm to the patient.	A patient who is allergic to clindamycin is given a test dose of clindamycin leading to anaphylaxis.
Near miss event	An incident that could have resulted in unwanted consequences but did not, either by chance or through a timely intervention preventing the event from reaching the patient.	Giving an epidural top up in the I.V line instead of the epidural catheter can lead to cardiotoxicity.
No-harm event	An incident that occurs and reaches the patient, but results in no injury to the patient. Harm is avoided by chance or due to mitigating circumstances.	Giving enema to the wrong patient.

## Consent & IV cannula

00:06:23

### Consent :

Always written.

### Components :

- Identification.
- Diagnosis.
- Procedure planned.
- Surgeon.
- Description of the procedure.
- Patient specific complications.
- Procedure specific complications (Only if incidence >1%).
- Benefits.
- Alternate procedures.
- Sign of patient, surgeon, witness, interpreter if patient is from a foreign country, guardian in case of a minor.

Age:	Yrs	Gender:	<input type="checkbox"/> Male	<input type="checkbox"/> Female	Registration No.
Interpreter Service:	<input type="checkbox"/> Yes	<input type="checkbox"/> No	Consultant:		

<b>MEDICAL CONDITION AND PROCEDURE (to be filled by the patient or the Doctor to document in patient's own words)</b>	
The doctor has explained that I have the following medical condition: .....	
..... and I have been explained and advised to undergo the following treatment/ procedure.....	
Anesthesia: Please see your "Anesthesia Consent Form". This gives you information of the General Risks of Procedure. If you have any concern(s), talk these over with your anesthetist.	

<b>Risks of this Procedure:</b>	
While majority of patients have an uneventful surgery and recovery, few cases may be associated with complications. These are seen infrequently and not all the ones listed below are applicable to one individual. However it is important that you are aware of the complications/risks that may arise out of this procedure which are as below:	
1.	.....
2.	.....
3.	.....
4.	.....
5.	.....
6.	.....
7.	.....
<b>Patient Specific risks:</b>	
1.	.....
2.	.....
3.	.....
4.	.....
5.	.....
<b>Benefits Explained to the Patient/Patient NOK:</b>	
1.	.....
2.	.....
3.	.....

Consent form

----- Active space -----

## IV cannula :

Gauge	Color	max. flow rate (mL/min)
14 (widest)	Orange	270
16	Grey	236
18	Green	103
20	Pink	67
22	Blue	31
24 (Narrowest)	violet	13

IV cannula

- Hypotensive patient : widest bore cannula is used to achieve the fastest flow rate.
- Burns patient : wide bore and long cannula (To prevent slipping of cannula d/t edema).

Superficial thrombophlebitis

- m/c complication of IV line insertion.
- Cord like structure can be felt.

## Surgical safety checklist

00:19:50

----- Active space -----

Dramatic decrease in the mortality of patients (From 1.9% to 0.2 %).

### major components :

#### Sign in :

- Patient is shifted into the OT from the ward.
- The staff who receives the patient will do the sign in.
- Aspects to confirm :
  - Identity.
  - Registration number.
  - Diagnosis.
  - Procedure planned.
  - Site marking with non-erasable ink.
  - Allergies.

#### Time out :

- Before induction of anaesthesia/incision.
- When the circulating nurse declares timeout, everyone introduces themselves to each other.
- Components :
  - Recheck the identity.
  - Surgeon : Diagnosis, procedure planned and time required to carry out the procedure, expected blood loss during the surgery.
  - Anaesthetist : ASA grade and risk factors (DM, HTN) of the patient, confirmation of time of prophylactic antibiotic administration (30 min to 1 hour before surgery).
  - Scrub nurse : Confirm sterility and make sure all the equipments for the procedure are in place.

#### Sign out :

- At the time of skin closure.
- Components :
  - Surgeon : Confirms the actual surgery performed, any expected complications or any equipment issue faced during the surgery.
  - Nurse : Gauze, mop, needle and equipment count. If a specimen is removed the nurse has to assure that it is been labelled.
  - Anaesthetist : Blood loss and expected risks complications.

#### Calculation of blood loss in the theatre :

- Soaked mop : 100cc (Blue/radiopaque lines on the mop help to identify them if left behind).
- Blood in the suction – Irrigation fluid used.
- 1 fist full of clots : 500cc.

----- Active space -----

Patient Name :	Procedure :	Date :
Notes :		
Before induction of anesthesia	Before skin incision	Before patient leaves operating room
SIGN IN	TIME OUT	SIGN OUT
<ul style="list-style-type: none"> <li>• Patient confirmed</li> <li>• Identity</li> <li>• Procedure</li> <li>• Site marked</li> <li>• Anesthesia safety check completed</li> <li>• Pulse oximeter on patient functioning</li> </ul> <p>Does patient have a known allergy?</p> <ul style="list-style-type: none"> <li>• NO</li> </ul> <p>Difficult airway? aspiration risk?</p> <ul style="list-style-type: none"> <li>• NO</li> </ul> <p>Risk of &gt;500ml blood loss (7ml/kg in children)</p> <ul style="list-style-type: none"> <li>• NO</li> </ul>	<ul style="list-style-type: none"> <li>• Confirm all team members have introduced themselves by name and role</li> <li>• Surgeon Anesthesia Professional and Nurse verbally confirm</li> <li>• Patient</li> </ul> <p>Anticipated critical events :</p> <ul style="list-style-type: none"> <li>• Surgeon reviews : What are the critical or unexpected steps, operative duration, anticipated blood loss?</li> <li>• Anesthesia team reviews : Are there any patient specific concerns?</li> <li>• Nursing team reviews : Has sterility (including indicator results) been confirmed? Are there equipment issue or any concerns?</li> </ul> <p>Has antibiotic Prophylaxis been given within the last 60 minutes?</p> <ul style="list-style-type: none"> <li>• YES</li> </ul> <p>Is essential imaging displayed?</p> <ul style="list-style-type: none"> <li>• YES</li> </ul>	<p>Nurse verbally confirms with the team :</p> <ul style="list-style-type: none"> <li>• The name of the procedure recorded</li> <li>• That instrument, sponge, and needle counts are correct (or not applicable)</li> <li>• How the specimen is labelled (including patient name)</li> <li>• Whether there are any equipment problems to be addressed</li> <li>• Surgeon, Anesthesia Professional and Nurse review the key concerns for recovery and management of of this patient</li> </ul>

**OT zones :**

----- Active space -----

**Protective Zone :**

- Changing rooms : Changed into the scrubs.
- Transfer bay.
- Pre-op and Post-op rooms.
- ICU/PACU.

**Clean zone :**

- Corridor that connects the protective zone to the aseptic zone.
- Equipment storage room.
- maintenance workshop.

Aseptic zone : OT.

Disposal zone : Waste is disposed here.

**OT positions**

00:39:21

Supine position

Lithotomy

Trendelenburg position

Lateral or Kidney position

Prone position

Reverse Trendelenburg position

Sitting/Fowler's position

Jackknife position

Lloyd Davies position

----- Active space -----

Position	Description	Indications	Remarks
Supine	Head end and the foot at the same level.	Abdominal and breast surgeries	m/c position
Trendelenberg	Head end is low and the foot end is raised.	Pelvic surgeries	To prevent the bowel from falling in to the pelvis
Reverse Trendelenberg	Head end is raised and foot end is low.	<ul style="list-style-type: none"> <li>Upper abdominal procedures</li> <li>Laparoscopic cholecystectomy,</li> <li>Laparoscopic sleeve gastrectomy</li> </ul>	Bowel falls into the pelvis making space in the upper abdomen
Lithotomy	Legs are supported on stirrups and adequate padding is done to prevent nerve compression.	<ul style="list-style-type: none"> <li>Obstetric surgeries.</li> <li>Gynaecology procedures.</li> <li>urogenital procedures : TURP, cystoscopy.</li> <li>Piles, fissures.</li> </ul>	Inadequate padding : Common peroneal nerve injury
Lateral/kidney	Patient tilted towards one side and a towel roll kept below the legs with support to keep the patient in place	<ul style="list-style-type: none"> <li>Thoracotomy.</li> <li>Latissimus dorsi flap for breast reconstruction.</li> <li>Pyelolithotomy.</li> <li>Nephrolithotomy.</li> <li>Nephrectomy.</li> </ul>	Over abduction of the arm : Brachial plexus injury.
Prone	-	<ul style="list-style-type: none"> <li>Spinal surgery</li> <li>Pilonidal sinus (Jeep drivers disease)</li> </ul>	-
Sitting/Fowler's	-	<ul style="list-style-type: none"> <li>CNS fossa (posterior fossa).</li> <li>Breast reconstruction surgery.</li> </ul>	<ul style="list-style-type: none"> <li>Advantage : Good exposure, relatively blood less field because of gravity.</li> <li>Disadvantage : Air embolism risk d/t negative pressure in veins (Prevention : Ligating the veins before cutting them + saline irrigation).</li> </ul>
Rose	Towel kept below the shoulder blades for maximum extension of neck and more exposure.	Thyroid surgery	30° head up : Less venous congestion.
JackKnife	Patient in knee elbow position.	Haemorrhoids, fissure surgery	Chest compression leading to impaired ventilation leading to positional asphyxia
Lloyd Davies	Combination of Trendelenburg and lithotomy	Rectal and anal canal surgeries	-

# SURGICAL BLADES AND ENERGY SOURCES

----- Active space -----

## Surgical blades

00:00:26

### Blades :

- **No. 11** Pointed/Stab blade :
  - used for Incision and drainage.
  - Also used for arteriotomy.
- No. 12 curved blade : For suture removal.
- No. 10, 15, 20, 21, 22, 23 :
  - These blades have a **belly** which is the curved & sharpest portion of the blade.
  - used to make incisions.

### Scalpel blade sizes and shapes

### Bard Parkers Handle :

- Correct way of holding the blade : Hold it like a **pen** or to **palm** it.
- Always use a mosquito forceps to hold the blade while mounting it on the BP handle.

### Passing sharp objects in OT :

- Ideal : **kidney tray**.
- Not available : Pass the needle with the **pointed end towards you**.

Bard Parkers handle

### making an incision :

#### Direction of blade :

- **Blade perpendicular to skin**, otherwise there will be undermined/bevelled edges.
- **Far to near** direction.
- Opposite side to same side.

----- Active space -----

Factors while planning an incision :

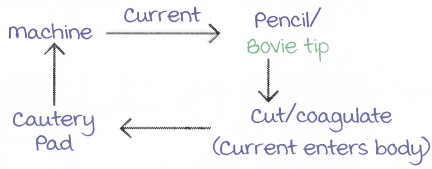

- Skin tension lines (**Langer's lines**) represent orientation of dermal collagen fibres and incisions made parallel to them heal better.
- Anatomical structures : must be careful not to injure surrounding neurovascular structures.
- Cosmetic factors.
- Adequate access.

**Energy sources**

00:10:00

m/c used energy source : **Cautery**.

Types :

monopolar cautery	Bipolar cautery
Resembles a pen	Resembles a prong
used for cutting and coagulation : <ul style="list-style-type: none"> <li>• Yellow button : Cutting</li> <li>• Blue button : Coagulation</li> </ul>	Only coagulation
Principle : 	Principle :  Current comes from one blade (Electrode) and passes onto the other blade, thus completing circuit
Cautery pad : <ul style="list-style-type: none"> <li>• Requires large area of contact</li> <li>• To be placed in well vascularized area with less hair</li> </ul>	No need for cautery pad
Cannot be used in patients with cardiac pacemakers, structures with end arteries or close to neurovascular structures	No lateral spread of current : Safe for use close to vital structures, end arteries and in patients with pacemakers

a. monopolar cautery b. Bipolar cautery

----- Active space -----

**Scenarios in monopolar cautery :**

1. Technician fails to attach cautery pad : Cautery will not work.
2. Small cautery pad is placed/only small area of contact : Burns at cautery pad site (D/t increased heat).
3. Spread of current through the body interferes with cardiac conduction.
  - In patients with cardiac pacemaker : Significant interference in conduction  
→ monopolar is avoided or mode of pacemaker needs to be changed (To avoid repeated shocking of the heart by the pacemaker).
4. Pedicle or narrow base : Channeling of current occurs.
  - Cautery given at the tip of the pedicle can cause channeling of current to the base causing burns at the base.
  - Hence in surgeries where end arteries are involved like ear lobule or penile surgeries or surgery, we avoid monopolar cautery.
5. Lateral spread of current in monopolar cautery : Can cause thermal damage to vital nerves and vessels → Hence avoided in :
  - Thyroid surgery (Damage to RLN, ELN).
  - Axilla (Damage to long thoracic nerve, thoracodorsal nerve).
  - CNS surgeries.
  - Parotid surgery.

**Energy sources, cutting vs coagulation/fulguration :**

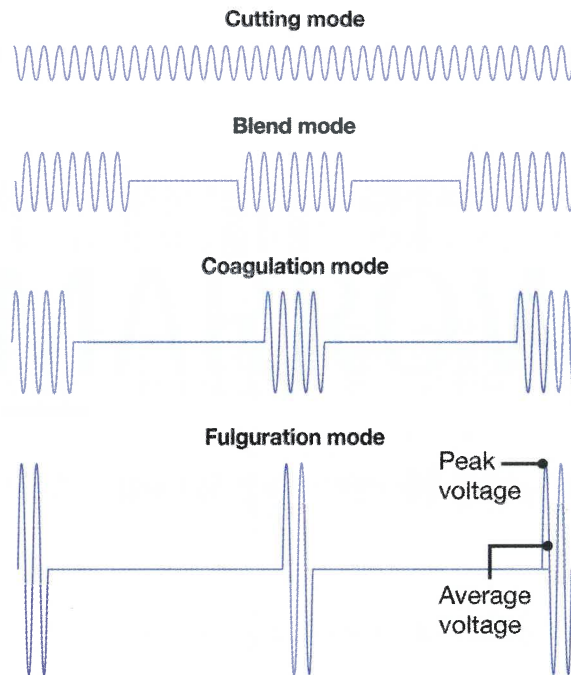

- Cutting current :
  - Low voltage continuous current.
  - Principle : Sufficient heat to cause cell water to explode into steam.
- Coagulation :
  - High voltage alternating current.
  - Principle : Cell death by dehydration and protein denaturation.
  - Never applied to skin as it can burn the skin.
- Fulguration mode : voltage higher than coagulation.
- Blend mode : Both cutting & coagulation (Combination mode).

Note :

Cautery sources are the m/c cause of OT related fire.

----- Active space -----

## Wave forms of cautery

## Ligasure :

- Uses **heat + pressure** to carry out coagulation.
- Can coagulate vessels **upto 7 mm** in diameter.
- Mechanism : Uses body's collagen and elastin to seal and divide.
- Feedback mechanism : Energy delivery is in a precise manner and results in automatic discontinuation of energy once the vessel is completely sealed, then the vessel can be cut.
- 1<sup>st</sup> generation ligasure : Only coagulation.
- 2<sup>nd</sup> generation ligasure : Coagulation followed by cutting.

## Harmonic scalpel :

## Features :

- Works on the **ultrasonic principle**.
- Oscillatory blade that oscillates b/w **20000-50000 Hz** oscillations that causes protein denaturation.
- Coagulation occurs **without heat production**.

Harmonic scalpel

## Advantages :

- Can be used close to vital structures.
- Precise cut.
- Can cut through scar tissue.
- Can coagulate vessels **upto 7 mm** in diameter.
